

Selling Points

Stainless Steel Braided Pump Connector

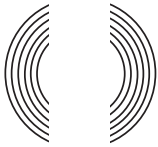

— Isolate Equipment Vibration at the Pump

- Convoluted hose design reduces vibration.
- Standard lengths are shortest available for vibration isolation.

— Reduce Noise Transmission

- Reduces sound waves transmitted down pipeline by the pump, allowing for a quieter design.

— Simplify Alignment Problems

- Standard lengths accept up to 1/8" offset.
- Longer lengths available for 3/4" and custom offset.

— Eliminate Equipment Alignment Stress

- Reducing equipment stress when piping doesn't completely line up with pump.

— Allow Higher Operating Temperature

- Connectors are rated to 750°F for applications that require the higher temperatures.

— Custom Fabrication

- Custom end fittings, overall lengths, and higher working pressures are available.
